SIDE

- Resolution up to 1080p.
- Single extension up to 70M
- No external power required
- Build in micro USB connector to stabilize the signal in a long cable run.

Over View:

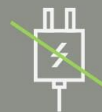

CMTX-HDEXT is an HDMI extender this supports the transmission distance up to 40 meters and resolution up to 1080p@60Hz. You can use CAT5e / Cat6 cable to extend the signal without any power adapter. The extender is also built with the dongle design, allowing you to directly connect to an HDMI display without actually applying an HDMI cable.

Easy Installation:

Special Designed, Mini Micro USB on transmitter Unit:

Although the price of some passive-type HDMI extenders is cheap, there are a variety of complaints about the extender sold on eCommerce websites. The most common issue is that the products cannot function as advertised, which includes:

- Short transmission distance, even using high-quality cables.
- Video/ audio loss.
- Image distortion.
- Wrong installation to cause improper installation.

Mini USB Design:

The extender typically extends the signal based on the 5V power from the HDMI source device, high-quality cables, and installation environment. To remain a stable connection, the mini USB port allows you to solve the following issues:

- When the environment has interference, you can use the mini USB port to provide sufficient power to stabilize the connection.
- The mini USB port can also act as an indicator that helps installers to identify transmitters from receivers.

Application :
